CORPORATE PRESENTATION & SMART REVENUE PLAN • ESTABLISHED AUGUST 2026

LOGITECH FINTECH

Bridging IT Sector Production, Digital Asset Development, and Structured User Revenue Sharing

LOGITECH FINTECH is an Information Technology and Financial Technology enterprise launched in **August 2026**. The organization operates on a production-backed capital deployment model, channeling user capital directly into revenue-generating software infrastructure, enterprise IT solutions, and digital technology assets.

Corporate Parameter	Official Record
Enterprise Name	LOGITECH FINTECH
Date of Launch / Incorporation	August 2026
Primary Sector & Activity	Information Technology (IT) Production & Fintech Revenue Services
Owner / Proprietor	Murkhi Mithun
Chief Executive Officer (CEO)	Ayush Setu Ji

1. VISION, MISSION & IT SECTOR OPPORTUNITY

The global digital economy relies heavily on scalable software platforms, cloud automation, and enterprise fintech tools. LOGITECH FINTECH was established to democratize participation in IT sector revenue without requiring individual users to build technical infrastructure from scratch.

Core Strategic Pillars

- **Production-First Capital Allocation:** User funds are deployed exclusively toward active IT production pipelines, commercial software licensing, and high-demand digital service contracts.
- **Transparent Profit-Linked Returns:** Rather than relying on speculative trading, user returns are directly tied to realized operational revenue generated by our IT production units.

- **Automated Digital Governance:** Real-time user onboarding, transparent wallet accounting, and scheduled daily payout distributions ensure frictionless operations.

2. OPERATIONAL WORKFLOW: CAPITAL TO PRODUCTION TO RETURN

LOGITECH FINTECH follows a disciplined four-stage cycle that converts user participation into measurable IT production output and recurring revenue distributions:

Stage	Operational Phase	Execution & Revenue Mechanism
Phase 01	User Capital Pooling	Registered participants select an active Smart Plan tier, contributing capital into the company's dedicated IT Production Reserve.
Phase 02	IT Sector Production	Funds finance software development, SaaS product deployment, enterprise API integrations, and commercial IT service delivery.
Phase 03	Commercial Revenue Generation	Completed software assets and IT contracts generate recurring B2B licensing fees, service retainers, and digital platform margins.
Phase 04	Behavioral Profit Distribution	Net operational profits are distributed back to active plan holders via automated daily income credits and referral incentives.

3. CORE IT PRODUCTION VERTICALS

To maintain consistent cash flow across market cycles, LOGITECH FINTECH diversifies its production investments across four high-margin technology segments:

- **Enterprise SaaS & Cloud Automation:** Developing subscription-based business management tools, CRM modules, and automated workflow software for commercial clients.
- **Fintech & Payment Gateway Infrastructure:** Building secure transaction processing APIs, ledger reconciliation systems, and digital wallet engines.
- **AI-Assisted Data & Analytics Services:** Delivering predictive analytics, automated customer support bots, and business intelligence dashboards.
- **Custom Web & Mobile Application Production:** Executing turnkey software development projects for domestic and international enterprises.

4. SMART PLAN ARCHITECTURE & RETURN FRAMEWORK

Participants can engage with LOGITECH FINTECH through structured Smart Plan tiers. Each tier corresponds to a defined production allocation weight, determining the daily revenue share credited to the user's dashboard.

Plan Tier	Production Allocation	Payout Frequency	Return Basis & Features
Starter Smart Plan	Entry-Level IT Node	Daily Automated Credit	Proportional share from entry SaaS & maintenance revenue; instant dashboard tracking.
Growth Smart Plan	Mid-Tier Production Unit	Daily Automated Credit	Enhanced yield weight from enterprise software licensing; direct referral bonus eligibility.
Executive Smart Plan	Dedicated Infrastructure Share	Daily Automated Credit	Priority allocation in high-margin fintech & cloud contracts; multi-tier team leadership rewards.
Corporate Partner Plan	Full Production Syndicate	Daily Automated Credit	Maximum operational profit share with dedicated account support and priority withdrawal processing.

> **Note on Return Calculation:** Specific plan entry amounts, daily percentage slabs, and tenure durations are configured dynamically inside the live user dashboard. All returns are governed by actual IT production performance and company risk-management policies.

5. REFERRAL & TEAM EXPANSION INCENTIVES

Alongside direct production returns, LOGITECH FINTECH rewards community builders who expand the company's user network through verified referral links:

- **Instant Direct Referral Bonus:** Earn an immediate commission when a new member registers via your unique referral link and activates a Smart Plan.
- **Real-Time Team Synchronization:** Every referral signup is tracked instantaneously on both the sponsor's team panel and the central administration dashboard.

- **Performance Milestones:** Active team leaders unlock tiered leadership incentives based on verified production volume generated by their network.

6. RISK MANAGEMENT & FINANCIAL GOVERNANCE

Sustainable wealth creation requires strict operational controls. LOGITECH FINTECH protects production capital through multi-layered governance:

- **Diversified Client Contracts:** Revenue is generated across multiple B2B software clients rather than relying on a single project.
- **Automated Daily Ledger Audits:** Every daily income distribution and wallet transaction is recorded with immutable timestamps for full auditability.
- **Reserve Liquidity Buffer:** A dedicated portion of IT production revenue is retained in liquid operational reserves to ensure timely daily payouts.

7. OFFICIAL ENTERPRISE REGISTRATION & MSME ATTESTATION

LOGITECH FINTECH operates in alignment with national digital enterprise standards and micro, small, and medium enterprise frameworks.
